Serial Ports Available The library can be installed as follows: The computer is restarted and the required ISA/PCI/VESA or RS232/RS485 ports are found. COnfiguration is allowed to be saved and the port is assigned a library name that can be used from within the application. The library can be used from a command-line utility (using the run-time library) and the user-specific libraries can be loaded. Compatibility The Dinamic Libraries are already installed with most operating systems (no installation required). Please refer to the following list: Your computer is restarted and required ISA or RS232/RS485 ports are found. The library can be used with the settings of address and clock configuration saved in the serial port using the run-time library. The user-specific library can be loaded and run in the background. Modules The library supports the following modules: PIXI (RS232) Modules: RS232 Module parameters: p_addr_low, p_addr_high, p_clk_fract, p_clk_high, p_init_cycle: all of these modules are required and must have a value. Note: This module supports the following additional parameters: p_parity, p_tx_dly, p_tx_parity This module is required and must have a value. Parameters
