This is usually done by a neutral-gray card with a gradation of gray and white, and a straight white line. It's different for every camera system. * **File naming.** Lightroom automatically renames files when you import them. With Photoshop, to maintain a consistent naming sequence you need to manually change the files with Filename: File Name. * **Backup strategy.** This is easy: You should always back up your files and work on separate copies of the originals you're working on. * **Organization.** For files you have open, there are three basic options: * **Duplicate:** A duplicate opens a second file with the exact same image. * **Open:** A new file opens, and you can work on the original and the copy at the same time. * **Apply:** When you choose this option, Photoshop automatically opens a new file and applies the image settings to the new file. This may seem like one of those "it depends on what you're doing" questions, but when you have more than one document open, the Apply option usually leaves you with no other choice. But when you're doing simple things and need to save a backup, then the Apply option saves a separate file with the settings applied, and the original can be saved

As with all of Nintendo's handheld devices, the DS and DS Lite were given titles that directly opposed their intended purpose. Nintendo gave the original DS a portable version of the GameCube's Super Smash Bros, and Nintendo fans — who will always be loyal to Nintendo — had hoped for better games instead of a port of Smash. Nintendo followed up its handheld version of Smash with the DSi version, which was called Super Smash Bros Brawl. The name was obvious. Brawl was a direct contrast to Brawl, or Melee. And so Nintendo's fans began feeling sorry for the company, as others on the internet inevitably called them out. After all, Nintendo does not make excuses for its mistakes — nor should it. And so Nintendo fans pondered what other games would have been better than Smash Bros on the DS and DSi. And indeed, they were right. So here, then, are our picks for the best Nintendo handheld titles — Nintendo GameCube games that Nintendo DS owners should have a nostalgic look back on. 1. Munch's Quest (Wii) This is the first GameCube game that many Nintendo DS owners have played. Munch's Quest was a mildly successful game, and gained a lot of acclaim as the first GameCube game to be made available for the GameCube Virtual Console service. The gameplay of the game is easy, as you'd expect from a game made for the GameCube system. The controls are simple, and the missions are made easy to finish in short order. The game is short, fun and good. 2. Mario Party Advance (Wii) The Mario Party series on the GameCube was a huge success. Nintendo took the successful party game formula, and expanded it for the GameCube. Mario Party Advance started and ended with a few tweaks to the original Mario Party formula. Each of the minigames in the game, as well as the board, are simpler than in the original. The game is less complex, and so the cheapness becomes evident. The fact that most of the board is made of cheap plastic buttons means that you can fairly quickly get a hang of the game. And the minigames are great. The Shuffleboard is a great way to pass the time when you can't find a party to go to. 3. Luigi's Mansion (Wii) Luigi's Mansion is the perfect game

Q: how to retrieve list items from fragment.class I'm new in android.I need to create a notification bar where it has list of songs downloaded on local music player.I tried to retrieve the list items but it gives only the last item.like: ListView list=(ListView)rootView.findViewById(R.id.list); String list_array[]={"Google","Airtel","Smartphone", "Memory"}; ArrayAdapteradapter=new ArrayAdapter(rootView.getContext(),android.R.layout.simple_list_item_1,list_array); adapter.setDropDownViewResource(android.R.layout.simple_spinner_dropdown_item); list.setAdapter(adapter); It makes the music player get only the last item. A: You are retrieving the last one for this reason: You are using the same adapter for the spinner which why list_array[4] is being set as the new adapter. You need to create a new adapter for each object in the array. Q: Can I get a list of all files changed in a particular git commit? When I run git log for a particular file, I'd like to get a list of all the files changed. A: You can try -G. See It says -G --git-log-graph Display the files graphically, similar to the output of git log --name-status --pretty="format:%B" A: If you have a look at git log --stat you will find that for files changed, you get: %a file's last modification time %k file's last modification time relative to the given-ref %C file's %{Last-Modified} header, via the given-ref %h file's last modification time relative to the HEAD commit, in the reflog %H file's hash ID %G file's graph,
